Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • I want to grow a crop that gives me a good profit. • Every season, choosing the right crop is becoming more difficult. • The weather doesn't follow the same pattern anymore. • Farming expenses keep increasing every year. • I want my hard work to provide a better future for my family.	THINKS • Which crop is best for my land this season? • Will there be enough rainfall for my crop? • Is my soil healthy enough to produce a good harvest? • What if I invest all my savings and still face a loss? • How can I improve my yield without spending too much?
RAMESH KUMAR  Role / User Type: Small-Scale Farmer	
DOES • Talks to neighboring farmers before making decisions. • Seeks advice from local agriculture officers and fertilizer dealers. • Observes soil condition and weather before sowing. • Uses fertilizers and irrigation based on experience. • Learns from previous farming seasons and improves farming practices.	FEELS • Worried about crop failure due to changing weather. • Confused by different advice from different people. • Stressed because farming costs are increasing. • Hopeful that this season will bring a better harvest. • Proud and satisfied when the harvest supports the family's needs.
